COURSE AIM

To give you a practical way to implement risk management principles and guidelines based on ISO 31000:2018, using risk assessment techniques from IEC 31010:2019.

What you will know

- How a risk management framework puts ISO 31000 into practice
- How the principles, framework and risk process relate to each other
- How to plan an assessment, choose and apply techniques, analyse results and use them to support decisions
- How to record and report the risk assessment process and its outcomes

Who should attend

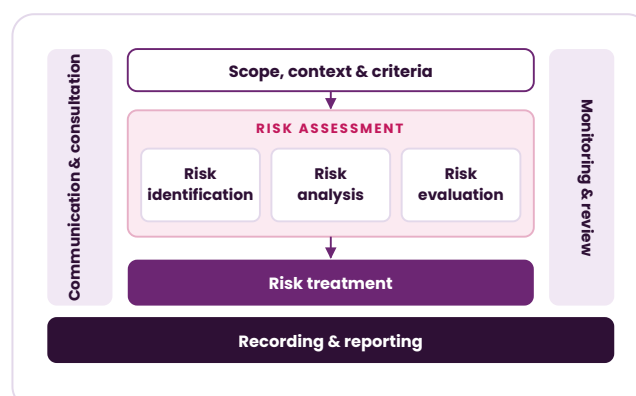

- Risk managers and chief risk officers
- Compliance, governance and internal audit professionals
- Business continuity, information security and IT managers
- Finance, operations and project managers who own risks
- Consultants who advise on enterprise risk management

No formal prerequisite.

What you will be able to do

- Run a baseline review of your organisation against ISO 31000
- Implement a framework and risk process aligned with the principles
- Elicit views from stakeholders and experts; identify risks and their sources, causes and drivers
- Integrate risk management with your other management systems

The ISO 31000 process

Two days: framework, then process

DAY 1

Principles and the risk management framework

- What ISO 31000 is and why it matters
- Risk, uncertainty and objectives; terms and definitions
- The eight risk management principles, from integrated to continual improvement
- Implementing in three stages with Plan-Do-Check-Act
- Framework: leadership and commitment; integration into decision-making
- Design: organisational context, commitment, roles, authorities and accountabilities
- Implementation, evaluation and improvement of the framework

ACTIVITIES

Terms and definitions · leadership and integration · organisational context · risk management policy · communication approach · evaluation and improvement

DAY 2

Risk process, techniques and implementation plan

- Communication and consultation
- Scope, context and risk criteria
- Risk identification: scenario analysis, structured what-if technique (SWIFT)
- Sources, causes and drivers: Ishikawa fishbone, root cause analysis, cindynics
- Selecting techniques with IEC 31010:2019
- Risk analysis, evaluation, treatment options and treatment plans
- Monitoring and review; recording and reporting
- Programme management: baseline gap analysis, milestones, Gantt chart, costs and resources

ACTIVITIES

Communication approach · scope · risk criteria · risk identification · analyse and evaluate · treatment plan · reporting · gap analysis · Gantt chart · final quiz

You leave with drafts of

- A risk management policy
- Risk criteria for likelihood and consequence
- Risks identified, analysed and evaluated across financial, operational, legal and customer areas
- A risk treatment plan
- A baseline gap analysis against ISO 31000
- An implementation plan as a Gantt chart

Good to know

- ISO 31000 is a guideline, so organisations are not certified to it. Individuals can be trained and certified as competent to implement it.
- Complete the course to receive the ISO 31000 Lead Implementer certificate, approved by Exemplar Global and verifiable at pricoris.com/verify-certificate.
- Trainer: Sourav Das.
